

Each state and territory have their own regulatory reporting requirements which are reported at different times of the year. Under the NRSCH, there are also national regulatory reports on financial and property management performance that a provider is required to submit to maintain registration.

Currently SDM has developed and maintains the quarterly NSW Unit Level Reporting (ULR) Tool. This report is a set of five individual reports outputted to csv format that is compliant with the data requirements for ULR submission.

The report is configured and customised by SDM for each client based on their reporting needs. Information to complete the ULR Tool is extracted from the main SDM modules data with DCJ specific information coming from customised Extended Data fields.

Main Features

- Maintained and supported by SDM
- Flexible for each client's reporting needs
- Generates the required separate submission reports
- Filtering capability

Integration

The NSW ULR is integrated with the following SDM modules:

- Rents & Housing Management
- Repairs & Maintenance
- Voids Management
